

**Plantevernmidler i miljøet – transport i jord, vann og luft (Norwegian)**

**Pesticides in the environment – transport in soil, water and air (English)**

**Summary**

It is a well-known fact that pesticides are transported away from the areas where they have been applied. In NIBIO Department Pesticides and natural substances chemistry we work with the environmental fate and behaviour of pesticides, in soil, water and air. Depending on the projects we have going we investigate these processes in lab, in field or with the use of computer models. In addition to performing studies in lab or field, a great part of our work includes chemical analysis of environmental samples, e.g. soil, water or vegetation. The type of projects we have going varies from year to year and depending on when students contact us the topics for theses might vary depending on the ongoing projects.

**Subject area (keywords)**

Pesticides in the environment, transport in soil, water and air.

**Language thesis**

Norwegian or English

Bachelor or Master thesis BIOVIT 2023/24

**Bachelor or Master thesis**

Both is possible.

**Credits**

30/60

**Project period**

Continuous

**Project/company**

NIBIO
