

Topic/Title

The potential for maximized use of barley and oats for broilers. Effect of soluble and insoluble fibre

Summary

This is a Master/Bachelor thesis based on the SUSBROIL project, where the aim is to determine the maximum inclusion of barley and oats in broiler diets, through using a mixture of hulled and dehulled cereals and through maximizing the efficacy of exogenous fibre-degrading enzymes. In addition, the effect of a fine grinding will be studied.

Subject area

Nutrition, poultry

Language thesis

Norwegian or English

Bachelor or Master thesis

Both possible
